Breakout	Timing		

Description

This drill starts the same as the first Continuous Breakout Drill, however, the wings are now making a pass to what would be the opposite wing coming through the neutral zone. D1 starts the drill be carrying the puck around the net and making a pass to F1. F1 controls the puck and makes a pass to F2. F1 then goes to the back of the F4's line and F2 skates down the ice for a shot. D1, after making the pass skates forward to F1's line and then skates backwards to retreive the puck that was just dumped into the corner by F5. D1 then skates aaround the net and delivers a breakout pass to F3. F3 controls the puck and gives a pass to F4 who has timed their break to receive a good pass from F2. F3 then goes to theback of F2's line and F4 takes the puck down the ice for a long shot on net. D1 skates to the start of F3's line and then retreats backwards to the bottom of the circle before opening up and skating forwards to the Defense line.
