Description

This seems like a simple drill but it is tougher than it looks. It is an overspeed drill so players have to move their feet the entire time. P1 and P2 start at the same time. P1 carries the puck along the blue line and around the far neutral zone face off dot. P2 skates up along the boards and through center ice along the red line and then turns up ice to take up the far lane. P1 makes the pass to P2 just as they turn up ice. The timing should work out so that P2 is receiving the pass just as they are crossing the blue line. P2 should receive the pass at full speed with their feet moving and get a shot off before the top of the circles. After P1 makes the pass they sprint to the far post.
