2 V 0 CATCH AND RELEASE

Time: **Station:**

Overview

This is an excellent station drill to sharpen timing, passing, and quick-release shooting. What makes it especially effective is the staggered entry - players don't arrive at the same time, so passes feel more like the ones they'll see in game situations. That slight delay forces them to read, adjust, and release quickly.

Setup

- Two players are in a single file line
- The coach is in the corner with pucks and passes to the first player in line
- That player cuts to the inside of the ice around the cone and makes a pass to the second player
- The trailing player times their route to arrive in a shooting position for a catch-and-release shot.
- The player who receives the puck needs to catch and release in one motion

Coaching Points

- Body Position: Stay balanced with hands out front for quick control and release.
- Timing: Arrive a half-step late so the pass comes naturally into the shooting lane.
- Shooting Mentality: Release quickly — don't overhandle the puck.
- Game-Like Mindset: Players should be ready to handle imperfect passes, just like in real play.
