2 V 0 HIGH ROLL

Time: **Station:**

Overview

This drill combines three important game-like skills in one sequence: picking a puck cleanly off the wall, executing a switch, and rolling high into space for a scoring chance. It develops timing, puck control under pressure, and creating separation in the offensive zone.

Setup

- Player 1 starts along the boards near the blue line with a puck.
- Player 2 is set below the goal line, a few feet off the boards.
- Player 1 rims the puck down the wall with enough pace to keep it moving.
- Player 2 picks the puck off the boards and immediately gets off the wall into open ice.
- As Player 2 climbs up ice, Player 1 times their route to meet near the hashmarks for a switch.
- After the switch, Player 2 continues into a high roll to the top of the circle, receives a return pass, and shoots in stride.

Coaching Points

- Puck Retrieval: Player 2 should angle their body to absorb the puck off the boards and move quickly off the wall.
- Timing on the Switch: Player 1 must delay just enough so the exchange happens naturally and with speed.
- High Roll Movement: The roll to the top of the circle should create space for a clean pass and shooting lane.
- Shooting Mentality: Catch and release quickly, keeping stride through the shot.

Why It Works

This drill not only simulates the common game scenario of rimmed pucks but also builds habits that help forwards create time and space off the rush. The combination of puck retrieval, switch, and high roll makes it a dynamic way to generate scoring chances.
