2 V 2 WITH OUTLETS

Time: **Station:**

Objectives: Teaching puck support while on offense and of defending against players with and without puck on defense.

Description:

- Two versus two with four support players (the X's) on the perimeter.
- Players with puck move and pass the puck to any supporting player and work to score.
- Defenders look to block passing lanes and steal the puck back.
- The defenders can go on offense after they steal the puck back and pass it to one of their outlets.
- Players rotate into the game, then to support players, then out (after each rep).

Points of emphasis:

- Players in line should watch the game and cheer for great plays!
- Defensive:
  - Be aware of where players without the puck are
  - Pressure to prevent the opponent from winning space.
  - Stick pressure to intercept the pass and/or steal puck.
  - Readiness to regain puck possession after losing puck possession.
- Ofensive:
  - Passing the puck to open teammates and moving after you pass (give & gos).
  - Being aware of where your teammates are before you get the puck so you can quickly make a play when the puck comes to you.
  - Quick passes and shots.

Variations:

- Can switch up the sides of the support players. Can have 2 on one team and 2 on the other team (like in the video) or you can have all support players be on offense and they pass back to the team that passed to them.
