QUICK START CONTINUOUS OUTLET

Time: **Station:**

The Quick Start Continuous Outlet from NewEdge Hockey helps players practice breakout passing, retrievals, communication, and more. This drill should have flow and a very strong focus on quality passing.

Setup

- Split up players on each of the half-walls.
- One player will start in the slot and receive a pass to start the drill:
  - Part # 1: Continuous Outlet Passing: players will work on practicing to both of their outlets (as shown in the video).
  - Part # 2: Continuous Retrieval Outlet Pass: players work on retrieving a puck off of the boards before they pass to their outlet (as shown in the video).
  - Part # 3: Continuous Retrieval Reverse Outlet Pass: players work on retrieving a puck off of the boards, then performing a reverse curl (with puck protected) before they pass to their outlet (as shown in the video).

Coaching Points

- Passing: Put a strong emphasis on passing quality and communication during this drill.
- Vision: The defenseman's quick start should get them into a position that allows them to see as much ice in front of them as possible. If not pressured, the defenseman **should not** turn their shoulders while moving behind the net. Doing so will take most of their vision/options away.
- Footwork: When the situation permits, a right handed defenseman should always put their left skate out on a forward to backward pivot which puts them in a ready to receive position instead of a crossed up position. Left handed defenseman should lead with thier right skate.
